Education

Ontario Tech University

Bachelor of Science in Computer Science

Sep. 2023 – May 2028

Oshawa, Ontario

Experience

IDRAK Enterprises - Startup

April 2026 – June 2026

Software Engineering Intern

Remote

- Fixed a critical startup bug in a FastAPI/PostgreSQL backend where fresh database instances had no seed data, causing all worker authentication to fail with unexplained 401 errors.
- Built a REST API endpoint with query parameter filtering using FastAPI and SQLAlchemy, following async ORM patterns for a production warehouse management system.
- Wrote a pytest unit test suite covering edge cases for Shopify data parsing functions, achieving full coverage on previously untested business logic.

Hollywood Gelato Company

May 2023 – Present

Barista Supervisor

Toronto, Ontario

- Supervised daily shift operations for a team of 5+ staff, maintaining efficient customer flow during peak hours (400+ customers/day).
- Managed inventory restocking and supply tracking, reducing stockouts and preventing service delays during high-volume periods.
- Resolved customer complaints in fast-paced environments, de-escalating conflicts and maintaining high customer satisfaction.

Centre Island

Jul 2021 – Sep 2021 (Full-time); May 2022 – Sep 2022 (Part-time)

Senior Ride Attendant

Toronto, Ontario

- Trained and supervised 10+ new ride attendants, ensuring strict compliance with ride safety procedures and reducing onboarding errors.
- Coordinated emergency response procedures during ride malfunctions, executing safety protocols to ensure rapid resolution while minimizing guest disruption.
- Maintained COVID-19 sanitation standards by disinfecting ride equipment after each cycle and organizing queue flow to improve safety and wait-time management.

Projects

Semantic Vault – AI-Powered Backend System | Python, Java, Spring Boot, FastAPI, AWS, Docker

Present

- Engineered and deployed a RAG-powered document Q&A API enabling semantic search over user-uploaded PDFs and text files using LangChain, OpenAI embeddings, and PostgreSQL with pgvector for production-grade vector storage and cosine similarity search.
- Architected a layered Spring Boot backend (Controller-Service separation) and integrated a FastAPI microservice for embedding generation and vector retrieval via RESTful APIs.
- Containerized services using Docker and deployed to AWS EC2 (t3.micro) and Railway, configuring security groups, environment variables, and public networking to serve live API endpoints over the internet.

Personal Finance Tracker — Live Site | Java, Spring Boot, React, Tailwind CSS, PostgreSQL, JPA

Present

- Built a full stack expense tracking application with a Spring Boot REST API backend and React frontend, implementing CRUD operations for managing personal expenses
- Integrated JPA/Hibernate for object-relational mapping, persisting expense data to a PostgreSQL database deployed on AWS EC2, with auto-generated IDs and structured entity relationships.
- Configured CORS policies and deployed Nginx as a reverse proxy on EC2 to route traffic from a custom domain, with Cloudflare handling SSL termination for secure HTTPS communication between the React frontend on Vercel and the Spring Boot backend.

Technical Skills

Languages: Python, Java, JavaScript, C++, Assembly, SQL

Developer Tools: VS Code, Visual Studio, Eclipse, Jupyter, Git, GitHub, Jenkins, IntelliJ

Technologies/Frameworks: PostgreSQL, pgvector, LangChain, REST APIs, FastAPI, Spring Boot, Docker, AWS EC2, Railway, Linux/UNIX, Bash, React, JPA/Hibernate, Tailwind CSS, Nginx, Cloudflare
